

Categorized as part of Rev 2.0 A prep

Issue No#	Issue
474	Add ability to chain implementations of configurable items
475	Run converters even if value to convert is null
477	Render a view programatically
483	Create a decoration component based on ui:decorate that can be used for creating templated forms
486	Integration with JAX-RS
494	javax.faces.convert.DateTimeConverter should be registered to registered for java.util.Date
495	Allow access-control related JSR-250 security annotations on managed beans
496	It should be easy to create localized FacesMessage instances
498	Upgrade Standard HTML RenderKit to XHTML
501	Must be able to determine the ID of a composite component via EL
502	Separator character needs to be determined from JS
503	Ajax application cannot determine that a ViewExpired Exception has occurred.
505	Image buttons do not use the resource feature
507	Facelets should skip comments by default
508	OutputLinkRenderer Encodes Javascript
509	Mismatch for Facelets-jstl URI location.
510	Expose the MessageFactory API
511	Extending navigationrules to exceptions
512	User supplied Onclick broken by automatically wrapping in function
514	Add tag to allow page authors to hook into events declaratively
516	Convert one property binding to/from several UI components
519	Page Parameters
522	Add an implicit UIPanel component for facets
523	Make the name of 'javax.faces.ViewState' configurable
524	Facelets PDL Documentation issue
525	UML Diagram needs to be updated (not sure what this is, sounds like 2.0 Rev A if it's a real issue)
527	Inject a reference of the FacesContext
613	Support standard AJAX server-side method invocation

Seems like we might need an "Extension Points" Subcomponent
